# THE HUMAN SKELETAL SYSTEM

The human skeletal system is made up of 206 bones that work together to provide support, movement, and protection for the body and its vital organs.

Bones are connected to each other by ligaments and tendons and are covered by muscles. The skeleton also contains the bone marrow which produces blood cells.

The skeletal system is vital for our survival. It is the framework that supports our bodies and gives them shape.

# THE HUMAN SKELETAL SYSTEM

1. What is the human skeleton system made up of?

---

2. How are bones connected to each other?

---

3. What does the skeletal system do?

---

4. What is the purpose of bone marrow?

---

5. What are our bones covered in?

---

6. Why is the skeletal system important for our survival?

---
